

### About TerraLab

TerraLab is a French company building AI-powered tools for the QGIS ecosystem. It was founded by Yvann Barbot and Lilien Auger to bring modern AI capabilities directly into the open-source GIS software that geospatial professionals already use every day.

### What AI Segmentation Pro does

AI Segmentation Pro is a QGIS plugin for automatic feature extraction at scale. It detects objects such as buildings, trees, swimming pools, solar panels and more directly from aerial, drone, or satellite imagery, and exports clean vector polygons ready to use in any GIS workflow.

- Runs natively inside QGIS, no external software or data upload required to work.
- Detects multiple object classes from standard raster imagery already in the project.
- Exports clean, editable vector polygons, not rough pixel masks.
- Saves hours of manual digitizing on every large imagery dataset.

### Pricing

MONTHLY

**49 EUR / month**

ANNUAL **2 MONTHS FREE**

**490 EUR / year**

40.83 EUR / month

Per seat. VAT excluded.

### How billing works

- Subscribe online by card through Stripe, in a few minutes.
- A Stripe invoice with VAT is emailed automatically after every payment, ready for expense claims or reimbursement.
- Cancel anytime from the account dashboard. No lock-in contract, no notice period.

### Security and data

Processing runs on EU infrastructure and is GDPR compliant. Data deletion is available on request at any time.
