

About TerraLab

TerraLab is a French company building AI-powered tools for the QGIS ecosystem, founded by Yvann Barbot and Lilien Auger. The plugins install from the official QGIS plugin repository and run inside QGIS, so there is no new software to roll out and no change to existing workflows.

What the subscription covers

AI Edit

Transforms aerial and satellite imagery with AI, directly on the map. From a simple prompt it removes objects, changes vegetation, simulates flooding or seasons, upscales low-resolution imagery, and extracts or classifies features, without leaving QGIS.

3,000 credits per month, around 150 generations. Standard, Detailed and Maximum output up to 4K, 100+ ready-made prompt templates, up to 12 reference images and map layers.

AI Segmentation Pro

Automatic feature extraction at scale. It detects buildings, trees, swimming pools, solar panels and more from aerial, drone or satellite imagery, and exports clean, editable vector polygons rather than rough pixel masks.

10,000 tiles per month, around 1,700 km² of imagery, with no limit on objects per tile or on zone size. Interactive click-to-segment stays unlimited and runs on your own machine.

Pricing

AI Edit		AI Segmentation Pro		Pack (both plugins) Best value	
MONTHLY	€29/month	MONTHLY	€39/month	MONTHLY	€59/month
ANNUAL	€24/month €290/year	ANNUAL	€33/month €390/year	ANNUAL	€49/month €590/year
2 months free		2 months free		Save €90 One subscription, both plugins on your account.	

Per seat, VAT excluded. Annual plans are billed once a year at the price of 10 months. Each seat works on up to 3 computers.

Evaluate it first, at no cost

Both plugins have a free plan, no credit card: 10 AI Edit generations and 300 automatic AI Segmentation detections per month, renewed monthly. Interactive segmentation is free and unlimited, so the team can validate the tools on real projects before any budget is committed.

How billing works

- Subscribe online by card through Stripe, in a few minutes.
- A Stripe invoice with VAT is emailed after every payment, ready for expense claims.
- Cancel anytime from the dashboard. No lock-in contract, no notice period.
- Several seats, a purchase order or a bank transfer: email us and we set it up by hand.

Security and data

- AI Segmentation interactive mode runs entirely on your machine: imagery, prompts and clicks never leave it.
- AI Segmentation automatic mode sends tiles of the selected zone to our infrastructure in the European Union.
- AI Edit sends the selected area, your prompt and reference images for AI analysis, which may run outside the EU; inputs and outputs are stored on EU infrastructure.
- GDPR compliant. Deletion on request at any time; diagnostic metrics can be turned off in the plugin settings.

Supplier details

TerraLab SAS, SIREN 104 501 861, RCS Paris, intra-EU VAT FR43104501861, 173 rue de Courcelles, 75017 Paris, France.
